ARCHITECTURAL STONE CORP.
INTERNATIONAL GRANITE AND MARBLE CORP.

141 East 44th Street • New York 17, N. Y.

The ARCHITECTURAL STONE CORPORATION is a division of International Granite and Marble Corp., specializing in finest imported I.G.M. granites from the world's most famous quarries. Some of these granites are exclusive with us. They contain the highest possible percentage of quartz which is a determining factor in durability and appearance. I.G.M. Granites are highly decorative and also effective in combination with other materials. They offer to the imaginative architect and discriminating builder the most permanent and beautiful building materials available today. I.G.M. granites are available in thin slabs from 7/8" up, comparatively light in weight and as durable as only stone can be.

Our thin granite veneers offer a new type construction, and give the architect or builder the benefit of a modern, highly decorative, permanent material, when building or modernizing. Veneer granite can be easily applied, attached or installed on old buildings.

We have accumulated a great deal of information through world-wide and varied experience. Installing of thin granite veneers is more economical than the heavier veneers. Our methods of application have been tested and proven over a large area of work. We have taken the lead in offering a complete service of granite veneer to architects and contractors in genuine granites of natural colors. Revolutionary methods of sawing and fabricating thin granite have made such progress possible. Experienced representatives and specialists equipped with samples and details are ready to arrange prompt estimates and contracts.

GRANITE

DESCRIPTION

RED

IMPERIAL RED
CARNATION RED
ROSE RED
VANEVIK RED
SANDVIK RED

Rich uniform crimson of strong texture featuring violet crystal
Black peppering on pronounced red field in fine uniform grain
Varying shade of rouge red with grey-violet crystal
Violet-red interposed with areas of colorful crystal
Fine grained even distribution of red, black, grey

PINK

CRYSTAL PINK
ROSAL
CARNOLIN
ELK ISLAND

Soft pink with grain of strong character
Strong pattern of rose, black, grey giving a rich overall pastel shade
Pronounced grey on soft red
Vigorous pattern of pink and grey

BLUE

BLUE PEARL
CRYSTAL BLUE
VALERIE BLUE

Distinct soft blue with pearl-like sparkle
Rich blue-grey of fine uniform texture and tone
Vigorous texture of grey and black on soft blue

BLACK

BONACCORD BLACK
ANDES BLACK

Almost jet black, of extremely fine texture
Fine undertone of grey highlights

GREY

GRAWOL
SILVER GREY
HOMOGENIA
PORTO GREY
CRYSTAL WHITE
REGINA
GRISAL
SILVERWHITE
CRYSTAL GREY
RADIO GREY

Dark grey with greenish cast and white speckles
Fine texture of light warm tone
Extremely fine texture of light grey with faint blue cast
Soft light grey of even texture
Milky background highlighted by bold grain
Sharp contrast of black on almost white in minute formation
Bold crystal on buff background
Overall light effect aptly described by its name
Bold pattern of crystal pearl on almost white background
Pearl highlights on soft grey-white

GREEN

EMERALD PEARL
PATRIA GREEN
SEAGREEN

Dark classic green enlivened with pearl-like sparkle
Similar to above but even closer grained
Soft color, close grain

SPECIFICATIONS EXTERIOR GRANITE VENEER

4a
Ar

This specification includes the furnishing of all material and labor necessary for the completion of the granite veneer work required by the drawings. Scaffolding will be furnished and erected by others.

All exterior granite veneer to be genuine granite known as (select desired name from list or prints) wherever shown on the architect's drawings.

The granite shall be sound and of good quality, free from defects that would impair its strength or durability.

Before proceeding with the work, a sample of the granite specified should be submitted for approval by the architect.

The contractor shall make and submit for the architect's approval shop drawings showing proposed layout and jointing.

All exposed surfaces of granite shall have highly polished finish.

In large areas of exterior veneer, vertical expansion joints shall be provided at intervals of about 30 ft.

Joints at least $\frac{1}{4}$ " shall be maintained between edges.

The architect will establish and guarantee to the contractor all

governing measurements and note them on the drawings and all related trades shall conform to said measurements.

Weight of veneer shall be relieved by continuous horizontal shelf angles of non-corrodible metal supplied and securely fastened to the building frame or masonry wall by others. These angles shall be at grade or sidewalk level, above door and window openings, over awning boxes, at each story height or in any event not more than 20 feet apart. The same applies to pilasters and other vertical facings.

All top joints, either on projecting courses or at the top of the veneer area shall be properly flashed over with non-ferrous non-staining sheet metal flashing, or covered by a non-ferrous, non-staining weather cap strip pressed into the joint filled with non-staining mastic compound, and raglets for metal flashing where required shall be filled. A completely waterproof installation must be provided.

Upon completion of this work, the contractor shall remove all surplus materials, rubbish, etc., give the granite a thorough cleaning. No harsh abrasive cleaners shall be used. A scrubbing with fibre brush and clear water will clean granite.

SETTING SPECIFICATIONS

Thickness of all veneer shall be $\frac{7}{8}$ " or up. Backs of all veneer pieces shall be thoroughly coated with approved damp-proofing paint before setting and shall be attached to the building wall by concealed wall ties or anchors of at least $\frac{1}{8}$ " diameter of brass or medium hard drawn copper or $\frac{1}{16}$ " aluminum or other non-ferrous anchors as follows:

For slabs of granite of over 2 square feet and up to 4 square feet in area, use 3 anchors;

From 4 square feet to 12 square feet, use 4 anchors;

From 12 square feet to 20 square feet, use 6 anchors;

On slabs exceeding 20 square feet, anchors shall be provided 1 anchor for each 3 square feet in area.

Anchors shall be attached to the veneer by being hooked or embedded in cement filled holes or saw-cut channels $\frac{3}{4}$ " deep in edges of veneer parallel to face. Attachment to the wall shall be made by hooking the anchor into a pocket properly drilled into the backing. It has to be filled with non-staining Portland Cement mortar with an accelerator (SIKA "C" or equal).

NOTE: Where granite is to be set upon cement foundation, the cement shall be damp-proofed on top and the clearance specified above shall be provided to avoid traveling of moisture.

Edges of all granite pieces forming joints shall be buttered with sufficient non-staining mastic to completely fill the joint. Spacers shall be used to maintain

the width of the joint, shall be kept back at least $\frac{1}{4}$ " from the face and shall be entirely surrounded with mastic.

On new construction, the veneer shall be set and all pieces completely parged on the backs with neat non-staining Portland Cement paste which shall be allowed to set and then shall be backed up with the masonry materials specified.

Where 2" veneer is used the joint can be a cement mortar joint raked back at least $\frac{1}{2}$ " and filled completely with non-staining mastic.

On multi-story reinforced concrete wall — backs of veneer pieces shall not be damp-proofed nor parged. A system of non-corrodible metal slots or boxes built into the concrete wall by others and non-corrodible dovetail or T-tail wall ties or anchors properly fitted and satisfactory to the architect and embedded in the edges of veneer pieces. Allow at least 1" clearance between back of veneer and concrete wall and grout this space full with non-staining cement grout made with clean washed sand, grout to be poured after each course of veneer is set in place to a depth that will not affect alignment 4" for $\frac{7}{8}$ " and 10" for 2" rodged and puddled and allowed to set enough to carry the weight of the next pour. Joints shall be buttered full with white Portland Cement lime mortar and shall be made absolutely watertight. Suitable color may be used in pointing material.

IGM ROSE STAR GRANITE — Ministry of Industry and Commerce Building, Buenos Aires, Argentina. Carlos Campolonghi, architect.

IGM FACILITIES — Quarries, processing plants, yards and warehouses are modern and efficient to serve you better.

STAR LINE

An exciting new
line of granite...

READY NOW!

Offered for the first time in America . . . an exclusive line of granites in brilliant, unusual shades . . . available only through International Granite and Marble Corporation and Architectural Stone Corporation.

The IGM STAR LINE is the exciting result of many years of preparation and development, to bring you new colors and shades . . . more flexibility and range in your planning and designing . . . quality which compares favorably with any of the world's most renowned granites . . . and prices which are definitely lower! The IGM STAR LINE includes:

IGM IMPERIAL STAR

Rich red with light blue and black crystals

IGM RUBY STAR

Rich red with brownish and bluish crystals

IGM PLATINUM STAR

Soft metallic white effect

IGM EBONY STAR

Fine grained blue-black

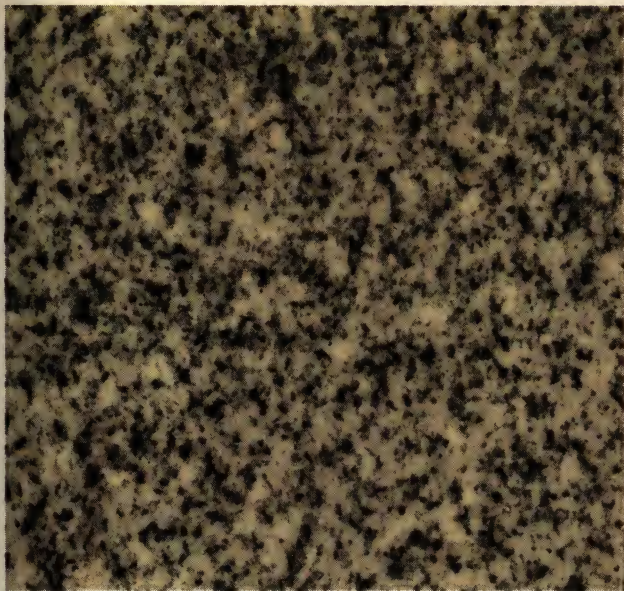

IGM ROSE STAR

Soft rose blush with grey-to-black marking

IGM IVORY STAR

Ivory grey with grey-to-black medium grain marking

The IGM STAR LINE is another important contribution to the American market by IGM and ASC, and we suggest that you inspect this new line at your earliest opportunity. Prices and stock lists are available upon request. Samples may be inspected at our showroom or at dealers handling ASC and IGM products. Contact us for names of dealers in your locality.

ELEVATION

SHOWING COMPOSITE APPLICATION OF
VENEER AND HEAVY STOCK GRANITE

The elevation above, and sections on the right, represent a tiny sample of the many thousands of applications and designs to which IGM granites lend themselves so efficiently, economically and attractively.

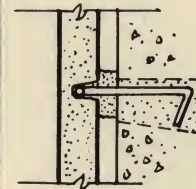

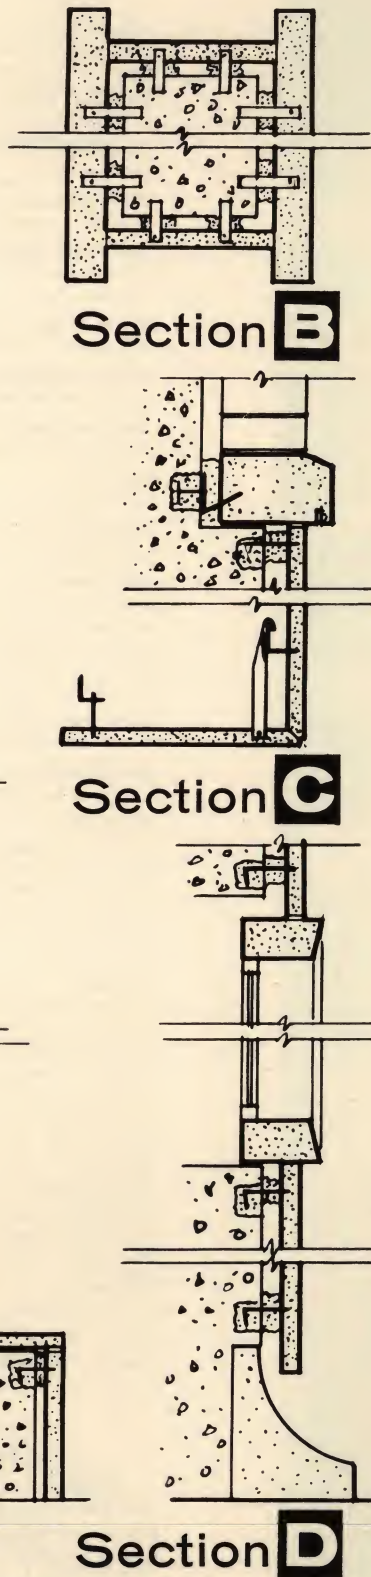

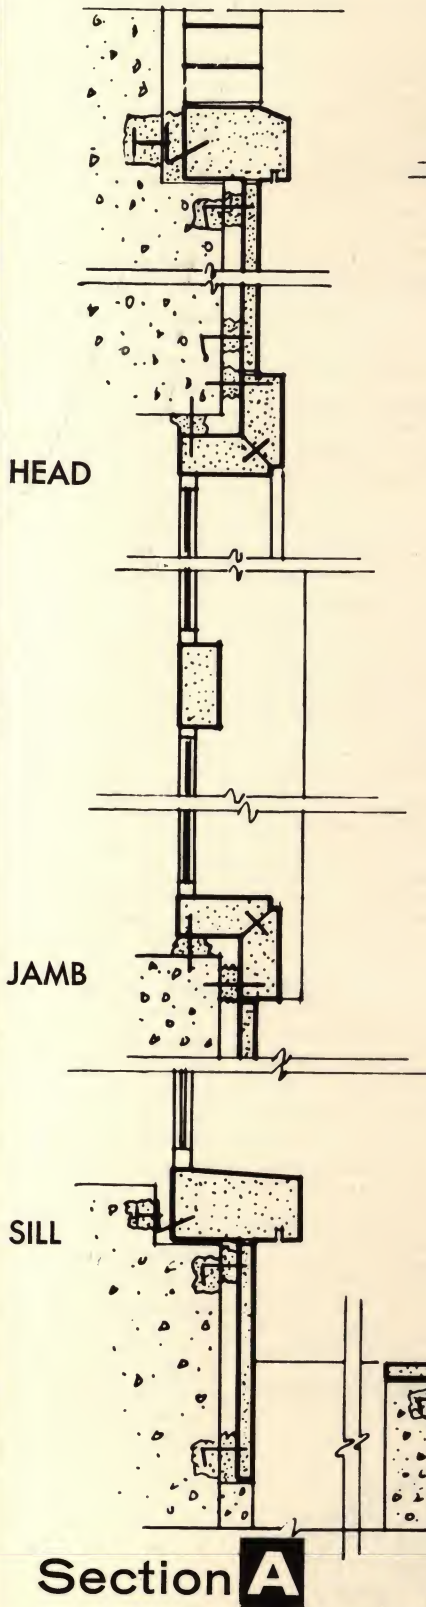

If you would like further, detailed information on any specific ideas or problems, please do not hesitate to write to us directly, or through your local dealers. Our files contain thousands of similar details and specifications. Our Architectural Department and our Designing Staff will be happy to help you in any way possible.

ASC-IGM is known to all marble and granite dealers . . . everywhere. This world-wide organization can fill your needs for granite of every type, including the popular $\frac{3}{8}$ " granite veneer, and heavy stock as shown on these pages. Specifications for heavy stock differ in some respects from the veneer specifications shown on page 3 of this catalog, and we will supply further information on your request.

For dependability, attractiveness and service, specify IGM granites and other architectural stone products. You will be completely satisfied.

FIRST CHOICE IN GRANITE

Preferred by those who know!

PREFERRED FOR QUALITY

IGM granites are of high quality, imported from the world's most famous quarries, and containing the highest possible percentage of quartz . . . which is a most important factor in the determination of durability and appearance!

PREFERRED FOR SERVICE

Extensive facilities, including offices from New York to California and a new warehouse and yard in New Jersey, (see below), make it possible for ASC-IGM to provide you with swift, sure, satisfactory service at all times!

PREFERRED FOR VERSATILITY

Fine granites, marble, onyx, stone, slate are all available through the same organization. Assistance to architects and builders through our skilled staff is always at hand. Whatever your problem, ASC-IGM will provide the right answer!

PREFERRED FOR DEPENDABILITY

The ASC-IGM organization is comprised of experts in the granite and marble field. We have spent over 50 years in the handling of granites, marble and stone. You can depend on our advice, our products, our service, as so many architects, builders and manufacturers do now!

Here is our newest warehouse, conveniently located in New Jersey, just a few minutes from Manhattan piers, railroad lines, other transportation. Our own private railroad spur and complete stock yard to provide better service.
